

MD5M Lions KidSight

Dear Parent,

Your child _____ was screened on _____ at
_____.

During the screening, the camera was not able to complete the measurement (thus the attached Screening Results indicated a n/a for each of the indicators).

This result may appear to be confusing to you and the incomplete measurements rarely happens, but it can occur for a number of eye related reasons. It is for this reason that we highly recommend you have your child checked by an eye care professional.

Sincerely,
